# new GUI and upload to Thingiverse

by Alex | No Comments

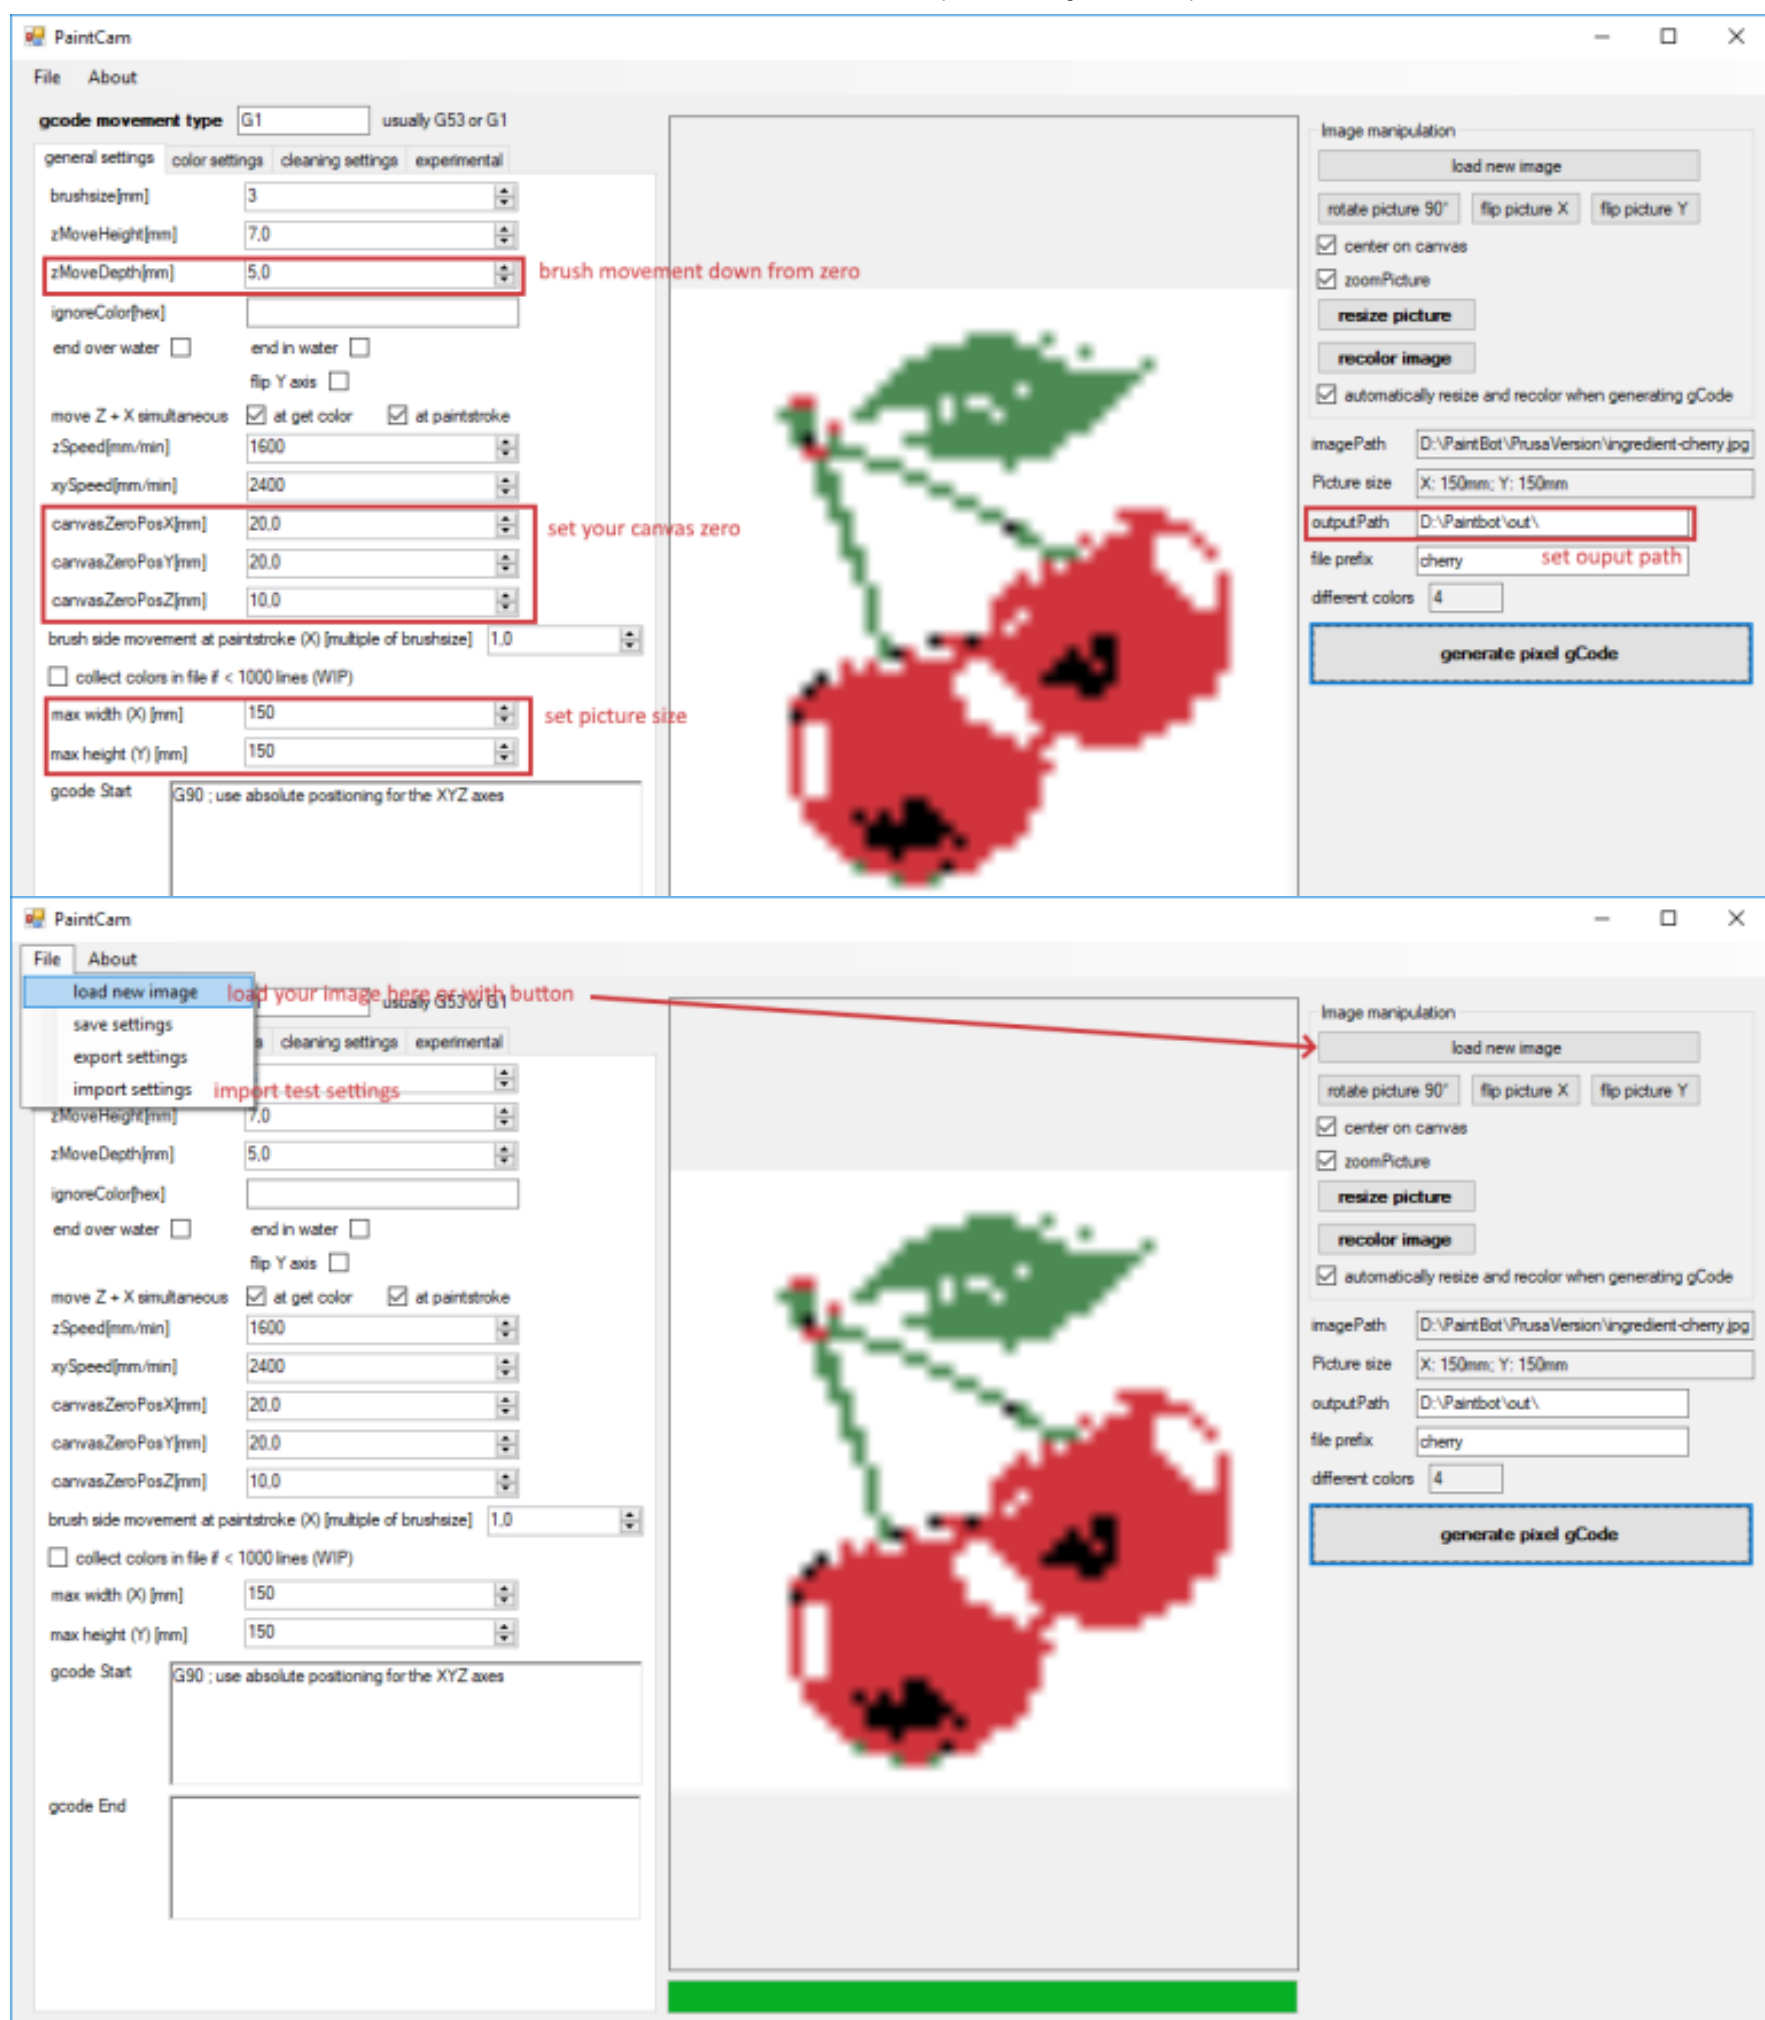

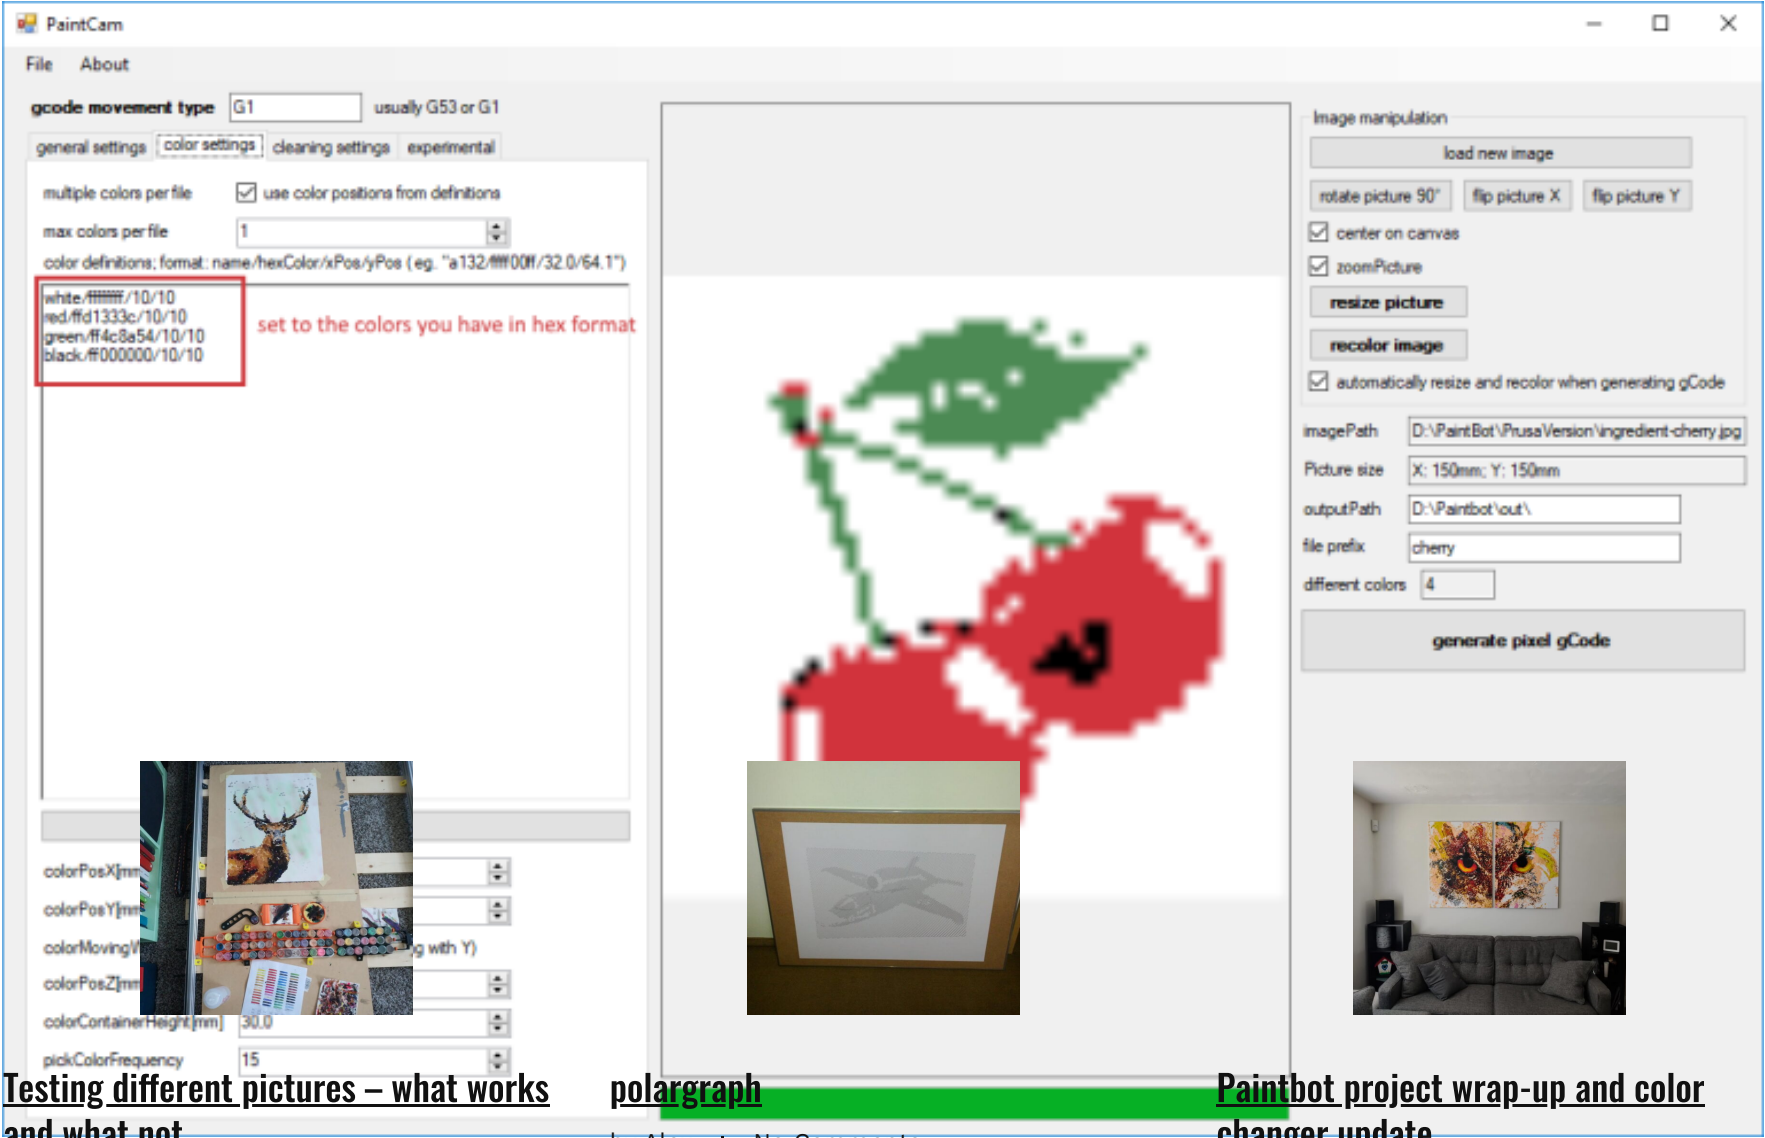

As mentioned before I planned to release the software together with a settings file which would work on a generic printer. For this I cleaned up the GUI a bit so it is not too overwhelming for somebody opening the program the first time. I also moved untested features like the circle filter I programmed but haven't tested so far into another tab.

new GUI

The settings have been tested on my i3 clone and on my ender3 and work fine so far. I hope a few people can try it out and share their results. Everything is available on Thingiverse under this link: <https://www.thingiverse.com/thing:4164851>

Testing different pictures – what works and what not
