eggbot

by Alex | No Comments

This project did never really work out. I used some code on an arduino I found online and started building a little eggbot like the one on https://egg-bot.com/.

After a while I kinda forgot about it and came back to it half a year later. At that point I didn't find the software anywhere and barely got it working by just copying different code snippets together. I was not willing to spend the time writing code from scratch or adopt any other code to the machine I've built. It worked somehow but never great. Maybe I'll come back to this thing at one point but I'm not sure about it. I think this project could be considered as a failure and probably not worth the time I've put into it. Today there are several versions on Thingiverse which are way easier and quicker t build and if I ever get interested in that again I'll probably just stick with one of these. Below is the only picture I was able to find.
